

PRECISION PERFECTION

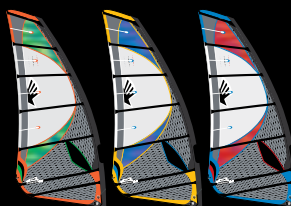

To lay down a perfect jibe, you need to be precise. And to be precise, you need a perfectly rigged sail.

Our new Calibrated Downhaul System allows you to set your downhaul with pinpoint precision.

Here's how it works: we rig and calibrate each sail in our factory with a load cell (a highly sensitive

scale used to measure tension). So, all you need to do is downhaul until the bottom of your mast lines up with our calibrated mark. Simple, fast, and a breeze to use. No more guessing about downhaul.

Elevate your sailing to perfection with our Calibrated Downhaul System, now on the 2013 Ezzy Cheetah.
